Police and Fleet Services

Police and Fleet Services through Police and Fleet Engineering, is developing an installation package that will be used to retrofit the current production Ford CVPs to use E-85 fuel.

E85 is a blend of 85% ethanol and 15% unleaded gasoline that is a high-octane, high-performance fuel made from renewable sources of energy. Fleet use of flex fuel vehicles is continuing to increase as a way of reducing operating costs and to meet the EPA Clean Air Standards. In many areas E-85 fuel is cost competitive with gasoline but is expected to gain an advantage as the oil prices continue to increase. Testing and certification of

Police and Fleet Services

the package are expected in fall of 2007.

Power Stop

Power Stop's fleet-specific brake system includes two cross-drilled or slotted brake rotors matched with the 911 Fleet carbon metallic brake pads. The Power Stop 911 system improves convection heat transfer as air flows

through and over the rotor. Quicker cool down time prevents brake fade during high-speed emergency stops. Combined with the Power Stop 911

Power Stop

brake pads, independent test results show stopping distance improves more than 10 feet over competitive brands during emergency stops at 50 mph. The brake rotors are also available cryogenically treated to last twice as long as conventional rotors.

Precision Fleet Brakes

Precision Fleet Brakes' line of EMLS™ brand brakes is for governmental and commercial fleets. PFB's revolutionary new brakes excel in harsh driving environments. Having originally developed the technology for racing, PFB is now transferring its proven brake technology to fleets across the United States. Independent law enforcement agency testing confirms that, on average, EMLS pads and rotors outlast OEM brakes by two to four times. This reduces cost-per-

Precision Fleet Brakes

mile and increases asset utilization (time on the road).

RAM Mounting Systems

The RAM Tough-Dock™ is available in both aluminum and high-strength plastic. This dock offers unmatched power capabilities, port replication, tamper-proof lock, integrated screen support and more. Simple to install and easy to use, the Tough-Dock features smooth lines, soft curves

RAM Mounting Systems

and ergonomic design—no points or sharp edges. Given that the Toughbook is designed for demanding environments, RAM built the Tough-Dock to go shoulder to shoulder with the Toughbook in today's law enforcement vehicles.
