Low Cost, High Quality PDA Mounts a Reality

RAM Mounting Systems is far and away the most innovative product line of its kind. RAM continues to evolve and adapt so as new devices come available, a mounting solution is ready to become the ultimate accessory. Patented rubber ball and socket technology creates a non-slip feature that while simple, is both brilliant and innovative. Besides providing perfect viewing angles, this feature also dampens shock and vibration that are the nemesis of most electronic devices. The often imitated but never duplicated mounting solutions offered by RAM are truly one of a kind and enhance every application they are used in. Utilizing the finest assembly hardware, durable plastics, rubber, and aluminum alloys, RAM kits and components are manufactured to perform above expectations.

Featuring Simplicity and Versatility

With much of the product line devoted to hand held electronics; RAM is no stranger to Pocket PC's. One of the stand-outs that RAM offers for PDA's is the universal cradle or dock for the iPAQ line. This amazing design fits them all with simplicity and versatility being key features. The RAM high strength plastic powered cradle is designed to hold the complete Compaq iPAQ PDA Series. How does it work? Simply place the top of the PDA into the top spring loaded retaining arms and push upward. Now swing the bottom of the PDA into the cradle and lower it onto the male interface at the bottom. Installation and removal of the PDA are easy but when in place, the iPAQ is very secure.

Two versions are available as powered or passive. Both feature fully adjustable side retaining arms in addition to being spring loaded to secure the PDA. Customers can easily adapt the cradle to support the iPAQ while not interfering with external ports or function keys. The docking model offers a

DB9 serial port, 12-28 volt input, built in filter to eliminate interference, and pass through allows all factory connectors to integrate with dock. Mating this top of the line iPAQ accessory to a RAM Mounting System for your vehicle will bring new meaning to mobile computing. It is a given that the size of the iPAQ makes it portable. However, getting the most out of the device means getting it up where it can be seen or accessed easily, not to mention safely.

Securely Mounts: Vertical or Horizontal

What good is a PDA with GPS receiver when it is sitting in a cup holder or on the passenger seat? RAM allows perfect placement for optimized signal reception, viewing, and access. Easy viewing and keeping your PDA within reach make any of these kits a wise choice to support your PDA. With mounts available like the Twist-Lock™ suction cup, rubber coated weighted dash base, or flexible adhesive base, practically any surface becomes a mounting surface. All of these favorites require no drilling of the dash or console. Of course bolt down kits are available if that option is needed. The RAM-B-202 round base with ball is a tried and true performer that is used all over the world to support electronic devices. Vertical, horizontal, or sloped surface? No problem. Just a few screws insure a rock solid platform for most any hand held device. Utilizing a variety of double socket, snap-link, and flex arms, RAM has a ready made solution for the look you want and within budget. For all of these reasons, it is easy to see why RAM is the ultimate accessory.

Take Your PDA Along for the Ride

Hand held computing can play a role in a career, academics, travel, and recreation. No matter whether one or all applies to you, RAM makes it easy to bring your PDA along for the ride. It is good to know that great products are available that make using your PDA in your car, truck, or even a tractor is easily done. Bet you did not know that RAM has been mounting PDA's for agricultural uses for years did you? Well, RAM is everywhere and for good reason. They take the devices you count on and make it possible to use them in ways and places you may not have thought possible.

When it comes to mounting solutions that are both high quality and low cost, RAM is your one stop shop. Innovative products for today's electronics and mobile workforce can be found right here in the USA. Located in Seattle Washington, the staff at RAM invites you to visit their website at www.ram-mount.com for their address and additional contact information. Technical support can be obtained by emailing staff@ram-mount.com. ■
