piece can be replaced when you take the vehicle out of service protecting your investment for resale. Jotto Desk also offers similar solutions for the Ford Explorer, Expedition F150, Tahoe, Suburban and Avalanche. Contact Jotto Desk at (877) 455-6886 or visit www.jottodesk.com to learn more.

Mounting Options

When it comes to mounting solutions that can be used on the dash or console, RAM has many options available to suit practically any application. Here are some popular choices.

Few dash mounts offer the portability of the company's weighted base for dash boards or consoles. If you find yourself going from vehicle to vehicle within a fleet, or even your own cars, nothing beats the grab-and-go simplicity of RAM's rubber coated base. As a platform for portable electronics, this product is ideal. If you have a PDA, GPS or cell phone, there is a cradle for it. Almost anything you can put in your pocket can be made easier to get at, easier to read, and safer to use when you're on the go. No more hunting around the passenger seat, console, or glove box for that ringing phone. You can get your GPS up where the signal is best with a RAM Mount. With three legs that can be form fitted to the mounting surface and a comfortable weight of four pounds, this base has "stay put power". Regardless of the sloped or curvy nature of your dash, the R.W.B. (Rubber-coated Weighted Base) can be formed to fit it like a glove. Combine the R.W.B. with a swivel or goose neck mount and custom or universal cradle and you'll have one of the best dash accessories available. And since these kits are modular, you have the freedom to choose a prepackaged kit or design your own from individual components.

Use the same car often and want a no-drill option for your dash? RAM also offers mounting solutions that utilize a double sided adhesive pad to securely hold a mount in place. Virtually any surface is a mounting surface when you use this system. Simply choose your location, clean the mounting surfaces, put the adhesive on the base and secure to the dash; simplicity. Adhesive will not damage the dash or stain it if removed. When you're ready to take it off, a hair dryer and five minutes is all that's needed. Having a RAM rubber ball base ready to support your electronics is an ideal choice for any vehicle. Perfect viewing angles, easy of adjustment for multiple users, and simple installation are just some of the reasons

to choose this option.

If you have the ability to fasten a mount to the dash using hardware, bases are available in many shapes and sizes with numerous hole patterns. The AMPS hole pattern being the most common. For a truly rock solid installation, nothing beats the right fasteners and our powder coated aluminum bases. Visit www.ram-mount.com to see these and other solutions to your mounting needs.

Panasonic PDRC Solution

Gamber-Johnson offers the Panasonic PDRC (Item No. NP-PDRC-IND4) as an in-dash solution for the Ford Crown Victoria/Police Interceptor (1998-newer). The system mounts to the ashtray/cup holder slide rail which helps to give the system strength. The PDRC in-dash system has several unique features including:

- Keyboard arm which extends the keyboard 8" towards the driver or passenger and can be swiveled up to 180°
- keyboard mount allows for fast removal and insertion of the keyboard
- ToughScreen display and keyboard can be offset toward the passenger side creating more room for the driver.

- This system does not obstruct HVAC controls and provides easy access to the AM/FM radio and the trunk release button

For more information call (800) 864-7795 or visit the website at www.gjmounts.com.

RAM Is Simple

Simple to install, simple to use, and simple to purchase. The New RAM Tele-Pole Systems with vehicle specific no-drill bases are the no nonsense approach to integration of mobile electronics and automobiles.

Here are just a few of the ways they keep it simple. The universal laptop tray will accommodate virtually every laptop or tablet made. No guessing whether it will work for you. The Tele-Pole design allows for simple adjustment

with a single knob that is easy to grasp. Turn a little for swing adjustment, turn a little more for height adjustment. And the universal ball and socket is the most simple of all. No slipping, just gripping, and shock and vibration are dampened as well.

Tripp Lite Launches New Utility/Work Truck DC-to-AC Inverter Line

Tripp Lite introduces three new DC-to-AC inverters (models: UT750UL, UT1250UL and UT2012UL) designed for the

utility/work truck market.

"Tripp Lite's new inverters are the ideal mobile AC power solutions for work trucks," said Steve Baer, Tripp Lite vice-president of Inverter Sales. "Tripp Lite Utility/Work Truck Inverters provide quiet power without the noise, fumes, CO, fuel, maintenance or capital costs of generators. They are ideal for work in residential environments and nighttime settings."

Tripp Lite Utility/Work Truck Inverters provide convenient mobile power for every job-site application: power tools, pumps, compressors, blowers, lights, power supplies, computers, electronic equipment, radios, cell phone chargers and more. Since Tripp Lite Inverters draw power directly from vehicle batteries, they are the quiet, economical power alternative in residential environments or late-night job sites without the noise, fumes, capital outlays, maintenance costs and occasional power overkill of generators. For fleets that have already incurred the capital costs of generators, Tripp Lite inverters provide crews with the option of quiet power.

Tripp Lite Utility/Work Truck Inverters, with the addition of a built-in battery charger, help to overcome any power deficits. When optionally connected to shore power at the end of the day, Tripp Lite Utility/Work Truck Inverters quickly and safely recharge vehicle batteries, ensuring that maximum power is available for the next day's service schedule. In addition, Tripp Lite Utility/Work Truck Inverters out-muscle other inverters with peak power up to 4000 watts handling tough loads like motors, compressors and incandescent lamps with ease, says the company.

Tripp Lite Utility/Work Truck Inverters are UL/c-listed and provide rugged reliability to stand up to demanding service fleet applications. They operate under the most severe conditions with heavy-duty, weather-resistant construction that meets tough marine standards for shock, vibration and moisture resistance. Tripp Lite Utility/Work Truck Inverters also enhance crew safety in moist environments with dual GFCI outlets. In addition, Tripp Lite Utility/Work Truck Inverters deliver more AC power from a truck's electrical system with high-efficiency DC-to-AC inversion, and they also save precious vehicle space with compact cabinet sizes.

Capstan Winch with Rotating Base

This product is a CH series capstan winch with rotating base. It features a rotating base that allows the winch to swivel 360 degrees. The base locks in 60 positions at 6 degree increments. Removing the locking pin allows the winch to be removed from the base. The maximum capacity is 3500 pounds. We also build a bayonet shaft version of this winch that accommodates standard bayonet style reels. Options include: a rope guide, portable hydraulic supply, and additional bases for use at multiple locations.
